

Priorities for Quality of Life after Brain Injury

Traumatic brain injury (TBI) can negatively impact quality of life (QOL)

We understand the factors that impact quality of life after traumatic brain injury, but we do not know the priorities for QoL using **patient-oriented research methods**.

Phase 1: Stakeholders consulted about TBI context

Phase 2: Questionnaires completed by people with TBI to identify different QOL factors

Phase 3: Focus groups with people with TBI conducted to identify most important factors

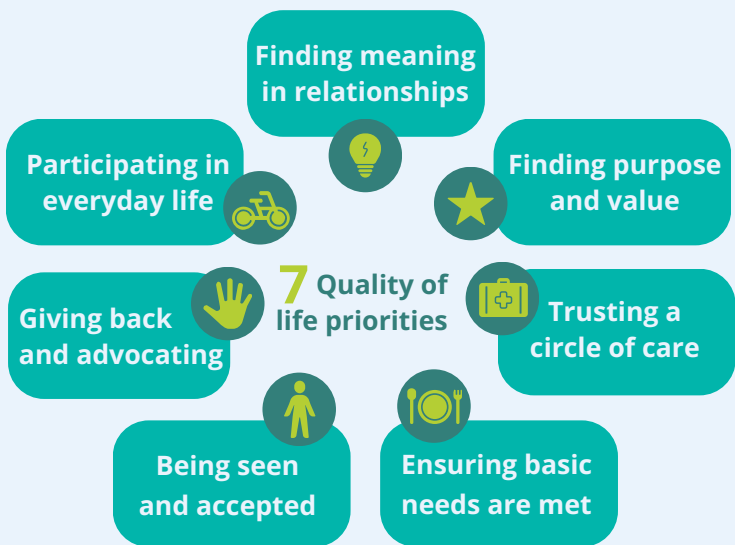

Phase 4: Stakeholders finalized QOL priorities

What we did

What we found

What to do now

Our findings emphasize the critical need to address these priorities for QOL after TBI to ensure improved health outcomes.
